

# Does the switch support port aggregation

It provides a step-by-step guide on configuring LAG, including checking port status, ensuring loop guard is inactive, and setting up the link aggregation through the switch's settings menu.

Port aggregation allows you to group multiple physical ports into one unit. Port aggregation is useful for implementing load balancing and provides a redundant link backup. To allow port aggregation, the ...

Aggregating ports on a UniFi switch allows you to combine multiple physical network connections into a single logical link, increasing bandwidth and providing redundancy.

If Link Aggregation is not supported by the switch, the traffic sent by your Synology NAS can still be balanced. With this mode, the lost links can be detected but not the cause (e.g., when the Ethernet ...

In order to configure 2 or more ports (up to 8) to be a port aggregate, simply navigate to Switching &gt; Monitor &gt; Switch ports and select the target ports, then choose &quot;Aggregate&quot;.

Port aggregation is not supported on most UniFi Gateways; it is only supported on the EFG, UXG Enterprise, UDM Pro, UDM SE and UDM Pro Max. Because of this, you should not aggregate two ...

Link Aggregation in UniFi allows you to combine two or more ethernet ports into one. This is great when you want to increase the throughput between two switches or need to connect a client ...

An Aggregation or &quot;Top-of-Rack&quot; switch is designed to connect everything in a rack at high speeds, then have an even bigger pipe out to the rest of the network. The Pro Aggregation does this with it's ...

A Link Aggregation Group (LAG) optimizes the usage of switch ports by linking a group of ports to form a single, logical, higher-bandwidth link. Aggregating ports multiply the bandwidth and ...
