

The required current can be output directly without zero protection function when making quick-break testing for circuit breaker. Suitable for all kinds of circuit breaker, switchgear, current relay.

HZDL-2000III Three Phase Primary Injection Test Set is a test equipment developed by our company. It combines the advantages of similar products at home and abroad, adopts numerical control ...

The source ground / zero sequence ground fault protection method with the Magnum PXR and PD-SB circuit breakers has many combinations of current protection levels that can be achieved.

These elements respond to the quadrature component of the zero-sequence current with respect to the zero-sequence voltage. Later we introduce a new directional element that uses the measured ...

Manually control, digital display of input voltage and output current. Movable structure, current output is adjustable. With zero protection function, to prevent the impact of large current damage to the tested ...

Designed to test 110V or 220V sockets in 1 easy step o Clear LED indication of wiring errors including missing earth, live/earth reverse, live/neutral reverse, missing neutral.

Purpose The purpose of this publication is to provide instructions for testing ground fault protection (Ground fault protection) systems in ABB low-voltage equipment. These instructions are for use with ...

Ground fault protection systems can be activated by pushing current through only the neutral sensor, equivalent to the trip test without using a phase sensor. This is a quick, functional test ...

With the aim of providing first-class GD2000D Primary Current Injection Test Set (Single phase, 2000A) and services, we have won high praise from our customers for our quick market response ...

This testing shall be conducted by a qualified person (s) using a test process of primary current injection, in accordance with instructions that shall be provided with the equipment. A written record of this ...

GD2000 Single-Sequence Protection Tester

Current
