

GBIC, short for Gigabit Interface Converter, is a versatile optical transceiver that converts serial electric signals into optical ones. It seamlessly fits into the GBIC port on switches and routers, ...

GBIC optical modules are the first form pluggable fiber optic transceiver modules used in the fiber communications industry. Although seldomly used today, GBIC's are still available for the 1.25Gbps ...

We offer GBIC transceivers for Gigabit Ethernet and Fibre Channel applications that support various wavelengths, distances, and connectors - AscentOptics.

In this post, we will systematically and comprehensively compare those terms, GBIC, SFP, and Mini GBIC, to help you understand the differences, advantages, and disadvantages of each.

Learn the differences between SFP, SFP+, GBIC, and XFP modules - speeds, distances, and compatibility, from Network-Switch experts.

Buy GBIC compatible optical transceiver modules. All GBIC compatible transceivers are certified for functionality, reliability and performance under rigorous testing parameters.

As a company specializing in advanced fiber optic products, you'll find a large selection of GBIC transceivers on-sale to consider for your next fiber optic project.

Available in classic 1×9 duplex packages and advanced form factors such as SFF, SFP, GBIC, and BIDI modules, our transceivers support both multimode and single-mode fiber.

The module is intended for single-mode fiber, operates at a nominal wavelength of CWDM and complies with Gigabit Interface Converter (GBIC). Each module consists of a transmitter optical subassembly, ...

Connect networking equipment with 1.25Gbps GBIC modules. Available in single-mode and multi-mode fiber and copper cabling options, for switches, routers, and network interface cards.

GNIC optical module
