

Home use 1 4 beam splitter

Thorlabs offers a wide range of optical beamsplitters. Our plate beamsplitters have a coated front surface that determines the beam splitting ratio while the back surface is wedged and AR coated in ...

The NanoSpeed(TM) Series 1×4 solid-state fiber-optic splitter splits the optical power among four outputs with any power splitting ratio. The input is polarization-maintaining (PM) fiber and the outputs are four ...

This 1×4 mini type PLC fiber optic splitter has a stainless tube package that can provide strong optical fiber protection. And the splitter ends terminated with sc apc connectors, so there is not fiber splice ...

Explore our collection of optical cable splitters and PON splitters for sale. Optical beam splitters are used to split the fiber optic light evenly into several parts at specific ratios.

We offer flexible orders, fast delivery, and comprehensive Fiber Optic Splitter 1×4 solutions with excellent quality and attractive pricing. Simplify project procurement with our one-stop solution, top ...

Beamsplitters are optical components used to split input light into two separate parts. Beamsplitters are common components in laser or illumination systems. Beamsplitters are also ideal for fluorescence ...

Beam Splitters Features: o Rugged compact design o Broad wavelength range o Low insertion loss o High extinction ratio o Low return losses o Low Polarization Dependent Loss (PDL) o Low Wavelength ...

Our beam splitters are made from high grade glass material with laser grade surface flatness & surface quality for tighter tolerance on the splitting ratio.

Beam Splitters are used to split incident light into two separate beams at a specified ratio.

For instance, a 1×4 split configuration would take a single light beam and split it into four separate light beams to be transmitted through four individual fiber cables, as illustrated in this graphic courtesy of ...
