

Ensuring the operational reliability of substation relay protection systems through rapid defect diagnosis and state assessment is crucial for maintaining power system stability.

The power information system and the physical system are independent event systems and schedule systems, and their forms are completely different. At present, t.

The article proposes a comprehensive fault diagnosis and prediction model for the state of the relay protection system using the support vector machine, improved particle swarm ...

To achieve information sharing and interoperability among intelligent electrical equipment in intelligent substations, the author proposes research on relay protection and security technology ...

This study proposes a fault diagnosis scheme of an intelligent substation relay protection system based on Transformer architecture and migration training model, aiming at improving the ...

The article proposes a comprehensive fault diagnosis and prediction model for the state of the relay protection system using the support vector ...

The relay protection system in intelligent substations ensures the safety and stable operation of power grids. While redundancy configurations enhance reliability, excessive redundancy ...

The intelligent substation is equipped with many relay protection systems, each with unique hardware features that have a substantial influence on ...

For intelligent substations, according to the DL/T860 engineering implementation standard, the network topology of relay protection system intelligent substations is divided into three layers, ...

This article takes the overcurrent protection of smart substations as an example and uses OPNET to establish the corresponding relay protection model and simulation of the substation.

The intelligent substation is equipped with many relay protection systems, each with unique hardware features that have a substantial influence on their operational lifespan, working ...
