Future-proof your infrastructure with a single PDU that can be deployed globally by simply swapping in the appropriate facility type cord for your region, allowing power scaling from 5kW to 27.6kW.

Rack mount PDUs effectively distribute power to racks where multiple outlets are necessary. Beyond the capabilities of a power strip, a rack PDU offers a range of intelligent features to help control the ...

A PDU distributes electrical power to multiple devices, while a PSU is a device component that converts the power it receives into a usable format. In most data centers, AC is the ...

Power Distribution Units (PDUs) are devices designed to deliver reliable power to IT equipment and other devices. They optimize energy flow, monitor power usage, and ensure uninterrupted power ...

A power distribution unit, also known as PDU, refers to a device fitted with multiple outputs designed to control and distribute electric power, which is normally used in the racks of networking equipment ...

A power distribution unit (PDU) is an essential electrical device used to distribute and manage power efficiently, especially in environments where multiple devices or systems require reliable power ...

PDUs deliver AC power from an uninterruptible power supply (UPS), a generator, or utility power source to servers, network/telecom equipment, and other devices. The PDU for your needs depends on the ...

Power Distribution Units (PDUs) are essential components in any IT environment. Whether you have a small deployment or a data center with hundreds of racks full of IT equipment, understanding PDUs ...

A PDU distributes power to multiple devices in a rack or data center. Learn how they work, the different types available, and what features matter most.

Although they may look similar to simple power strips, today's rack PDUs do more than bring power to IT equipment (PDUs vs. power strips). They provide monitoring, metering, and ...

A Power Distribution Unit (PDU) is a device that helps manage the flow of electricity within a data center. It takes power from a main supply and distributes it to equipment like servers, routers, ...

A power distribution unit (PDU) is a device with multiple power outlets that provides electrical protection and distributes power to IT equipment within a rack.
