

Magnetic shielding distribution box

A vital aspect of this packaging strategy is the use of iron sheets to modify the magnetic field distribution surrounding the packaged magnets. This step involves surrounding the bottom and ...

For shielding of low frequency magnetic fields, we produce shielded boxes made from our patented Mu-ferro HD material.

Electrical panels and breaker boxes can generate measurable low-frequency magnetic fields (60 Hz), particularly when installed adjacent to bedrooms, living areas, offices, or other frequently occupied ...

With our long experience in both electromagnetic engineering and metallurgical specification, we are able to offer a full range of magnetic shielding products - from small components of less than 3mm to ...

MagInduct is a North American leader in shielding solutions for magnetic, RF, and RFID fields. We provide custom shielding solutions--including consulting, design, sales, and implementation--to ...

These enclosures reduce electromagnetic interference (EMI) and radio frequency interference (RFI) from equipment such as motors and generators. All have a woven steel gasket for continuous ...

To Shield or Not to Shield? It is usually not desirable, especially if office or living space is limited, to evacuate an entire room or several rooms exposed to very high magnetic field levels.

This type of shield has many uses but is typically used in the automotive, audio and power generation sectors. With our fully integrated manufacturing, tooling and hydrogen heat treatment facilities we are ...

MagInduct is a North American leader in shielding solutions for magnetic, RF, and RFID fields. We provide custom shielding solutions--including consulting, design, ...

The wide range of RF shielded boxes is suitable for different working environments due to their compact size. Each product includes a modular I/O panel to support unique features and specific shielding ...

It is highly flexible, sturdy, frost proof, rot proof and noncorrosive. Aaronia MagnoShield FLEX has been developed especially for shielding alternating magnetic fields caused by cables, transformers, ...
