

Jenoptik develops and manufactures individual modules and complete systems for semiconductor equipment. Our core fields of technological competence include high-precision optical and optical ...

What is Co-Packaged Optics? Co-Packaged Optics (CPO) is a technology and design approach where optical components, such as lasers and photodetectors, are integrated alongside electrical ...

These tools and machinery are essential for producing high-precision optical components, such as lenses, mirrors, prisms, filters, and optical fibers, with the required optical properties and ...

Optical assembly solutions for demanding applications in the semiconductor capital equipment, medical instrumentation, industrial, aerospace, defense and homeland security markets often require state-of ...

With these capabilities, equipment and systems, we can respond and accommodate many of your Optical Module Assembly needs. We also manufacture and provide housing components ...

Our lineup includes filter type spectroscopic modules (C13398 series) specialized for signal detection of many known wavelengths, and spectroscopic modules with light sources (C16028 series) that make ...

As an OEM (Original Equipment Manufacturer) supplier, ZEISS Semiconductor Manufacturing Technology (SMT) enables the semiconductor industry worldwide with optics and other optical modules.

Data, design and specifications may not simultaneously apply; or depend on individual equipment configuration, process conditions and materials and may vary accordingly.

Luna offers a complete line of high performance active and passive fiber optic modules and components for a wide range of fiber optic systems, including interferometric systems for fiber optics sensing, fiber ...

For research facilities, System integrators (OEM), and industrial users looking for customized solutions, SmarAct provides a high-performance toolbox of modules that can be individually selected and ...

Optical Module Processing Equipment
