

Paraguay S40A Relay Protection Tester

S40A is a type of 3-phase protection relay test set, with 3*40A, 3*300V, and a local control system. It is a portable and economic secondary injection tester, and easy to use.

View and Download Ponovo S40A user manual online. Three-Phase Relay Tester. S40A test equipment pdf manual download.

The S40A Protection Relay Test Equipment is a high-performance and compact testing solution designed for accurate testing of protection relays in substations, power plants, and industrial ...

Type Break capacity ac Break capacity dc Binary output,relay 1 Potential free relay contacts, software controlled Vmax: 300Vac Imax: 1A Vmax: 300Vdc Imax: 1A Power supply Nominal input voltage ...

The Ponovo S40A is a Universal Test System that can be used as a G59 and other simpler relay testing functions such as a Secondary Injection Test Set.

This model relay test equipment is designed with 3 currents (3*40A) and 3 voltages (3*300V).The relay test system is easy to use and quick in process with the help of local control and ready test modules.

This module is used to check the transmission line protection relay scheme. User can set zone setting so simulate fault, checking relay operation and auto re-closing function. Actual circuit breaker ...

The document describes the S40A Protection Relay Test Set. It has 3x40A 3x300V current and voltage outputs and can test various protection relay functions listed in IEEE codes. It has manual, ramp, ...

S40A is a type of 3-phase protection relay test kit, with 3*40A, 3*300V, and also a local control system. It is a portable and economic secondary injection tester, and easy to use.

S40A is an ideal secondary injection tester for all power utilities, power plants, relay manufactures, panel manufactures, research institutes, universities, testing companies, etc.
