

# Parameters of Optical Cable Fusion Splicing Equipment

As mentioned in the section "Factors Affecting Splice Quality" (pg. 2), two main parameters define the quality of the fusion splice: fiber strength and induced loss at the splice point.

The mass fusion splicer machine parameters are set as instructed by machine manufacturer/manual. Main parameters are fiber type, fiber count in ribbon (4/6/8/12), and splice mode.

This specification describes the requirements for a Fully Automatic Fusion Splicer to be used for splicing single-mode and multi-mode fibre systems in use by Transnet Freight Rail.
