

Redundancy Scheme for Core Switches

ECMP just lets the access-layer switch understand that either of the redundant uplinks is a valid path towards the rest of the routing table. So unlike STP, which would want to cutoff one ...

So when one of the "new core" switches goes down, anything connected to it will still be offline. You can design around this by having redundant connections to the different "cores" and letting STP handle ...

In the core layer, I want to have redundancy, which means that if the main core switch of my network has a problem, the backup switch will automatically enter the circuit.

Solved: I want to provide best redundancy for an access switch (Cisco 3650) when connecting to two core switches (Cisco 9500 series), as show in attached topology.

One of our branch offices (c20-40 users at anyone time) has a requirement to add some redundancy to the network. We've added a HA Firewall pair and now looking at the switching network.

I use first layer 3 switch for vlans and i want to use the switch as a default gateway for switches. Their default gateway is 192.168.0.254, i gave this ip address to "int vlan 1" of the layer 3 ...

I use first layer 3 switch for vlans and i want to use the switch as a ...

Does the core have 2 sups that would provide some level of redundancy once it had to power sups with separate feeds that would just leave the chassis as only point of failure and they ...

Another advantage of VSS or any similar stacking type technology is that each access switch can have active active 10G uplink back to the core. If you mix vendors, you would probably ...

Border and core network devices require multiple connecting links for redundancy and scalability, so sufficient module expansion must be readily available for provisioning new links. Link aggregation ...

I'd aim for a ring topology with min 2 fibres between each building on different routes if possible with the switches in each powered from different UPS or power source if they do not have ...

Setting up redundancy in Cisco network environments is crucial for ensuring non-stop service availability and minimizing downtime. Whether you're a network engineer or an IT enthusiast, ...

In this tech paper, you will learn about the key protocols for building a redundant network and discover--based

Redundancy Scheme for Core Switches

on five examples--how to design highly available three-tier or two-tier networks ...
