

Retired Optical Cables

Many telecom companies have begun technology transitions. One such transition involves retiring copper networks to replace them with more modern technology (fiber optic cable, wireless, etc.).

Crews recovering the first transatlantic fiber-optic system, TAT-8, are bringing up repeaters, steel "fish-bite" armor, and copper power conductors, all of which are now being ...

Subsea Environmental Services is currently hauling TAT-8, the first fiber-optic cable ever laid across the Atlantic Ocean, off the seabed near Portugal, according to a WIRED feature published...

Many copper cables in service today are well over 100 years old. The skills, institutional knowledge, and materials to support these networks continue to shrink every year.

Learn fiber optic cable recycling: what's inside, how to prep scrap and spools, best options for small vs bulk loads, plus documentation tips.

Online shopping for Fiber Optic Cables from a great selection at Electronics Store.

CommScope designs and manufactures a comprehensive line of fiber optic cables--from outside plant to indoor/outdoor and fire-rated indoor fiber cables.

First installed in 1988, the TAT-8 transatlantic fiber-optic submarine cable connected the United States, the United Kingdom, and France globally. Containing two working fiber-optic wire pairs...

First installed in 1988, the TAT-8 transatlantic fiber-optic submarine cable connected the United States, the United Kingdom, and France globally. ...

That old campus network cable might become lab-grade glassware, solar panel components, or even thermal insulation in homes. Increasingly, telecom giants close the loop by ...
