Protective relays and devices have been developed over 100 years ago to provide "lastline" of defense for the electrical systems. They are intended to quickly identify a fault and isolate it so the balance of ...

Moreover, new power generation sources often connect to the grid in mixed configurations, and variations in inverter control strategies and parameters across manufacturers lead to inconsistent ...

The objective is to ensure that faults on the generation equipment are detected accurately and rapidly (eg, by use of unit protection schemes such as differential current) and rapidly cleared locally before ...

This webinar provides an overview of the evolving power system in Samoa as the country increases its integration of renewable energy resources. The presentation introduces the structure of the national ...

Her background combines technical expertise in electrical power systems with project management skills, and her work focuses on enhancing the reliability and performance of power ...

Recognizing the dire need for advanced relay protection, this report presents a comprehensive analysis of the evolving landscape. It outlines technical challenges, potential innovative solutions, equipment ...

The Electric Power Corporation (Samoa) is looking for a consultant(s) to carry out a comprehensive review of its protection system. This Request for Proposal is for this purpose.

The grid code was written after assessing the requirements relating to voltages and frequency range of the island, understanding different options to integrate Renewable Energy sources into the system ...

Particular attention is given to the technical challenges of operating a small island power system with high renewable penetration. Key lessons learned and potential strategies for maintaining reliable ...

The Asian Development Bank (ADB) has supported the Government of Samoa and the Samoa Electric Power Corporation (EPC) to upgrade the transmission and distribution system in Samoa.
