

Waterproof DC power distribution unit for server racks

Server Technology produces the highest quality Data Center rackmount power distribution units (PDUs) and monitoring solutions.

These devices ensure clean, stable power reaches every server, switch, and storage device in your racks, while offering the monitoring and control capabilities vital for modern data center management.

Custom load-specific distribution blueprints designed for maximum power density and thermal stability across your whitespace. Built in our state-of-the-art US facility using premium components from ...

Our team works directly with OEM engineers and System integrators to design custom quality panel distribution solutions that reduce installation time, simplify maintenance, and ensure long-term ...

With the use of a Delta rPDU, energy flows steadily to every device inside a rack cabinet. Protection, optimized power distribution, and intelligent management begin with Delta rPDUs for your data center.

Providing reliable and cost effective power distribution, the Basic PDU offers IEC outlet grips, tool-less installation in server racks, color-coded outlet sections and a high operating temperature.

PDUs can be mounted in equipment rack enclosures to supply power to rackmountable IT equipment, such as servers, switches and routers. These power units can also provide in-depth power ...

Metered rack Power Distribution Units (PDUs) provide real-time remote monitoring of connected loads. User-defined alarms warn of potential circuit overloads before critical IT failures occur.

Increasing rack power density both in the data center and at the network edge means that reliable power distribution is crucial. Our innovative power distribution units and rack PDUs not only maintain power, ...

Compare 2025's top power distribution units for server racks. Discover features, scalability, energy efficiency, and reliability to optimize your IT setup.
